SUMMARY

Passionate fresh graduate Web Developer with 2+ years of full-stack experience in HTML5, CSS, JavaScript, TypeScript, .NET, and databases like Microsoft SQL Server, SQLite, and MySQL. Proficient in React JS and Next JS. Led a capstone project for warehouse management, enhancing development and project management skills. Interned at UEP ID Production, creating an ID card management application, gaining expertise in agile methodologies and teamwork.

PROJECTS

UEP ID Production Online Application

📅 03/2024 - 05/2024

Developed an online application for UEP ID Production during my internship.
- Created a web application to reduce long queues for ID card applications at the UEP ID Production office.
- Designed and developed the system using Typescript, NodeJs, NextJs, React Hooks, TailwindCSS, Prisma ORM, MySQL, Zustand, and Shadcn UI.

UEP Warehouse Management and Inventory System

📅 2023 - 2024
🔗 https://github.com/jpdevdotcom/UEP-Warehouse-Management-and-Inventory-System

Developed a web application to optimize process flow for UEP Warehouse as my Capstone Project.
- Created a web application for UEP Warehouse to streamline the process from stock-in to stock-out of items.
- Built the system utilizing HTML, Bootstrap, JavaScript, C# .NET, Blazor Server, MS SQL, Syncfusion, and Bold Reports.
- Developed a WEB API using C# and .NET Core for frontend integration, and deployed the application locally on Internet Information Services (IIS).

UEP WMIS API

📅 2023 - 2024
🔗 https://github.com/jpdevdotcom/wmis-api

Constructed an API for my system and another group's system due to our shared database.
- Because we share a single database, I developed an API deployed on another group's laptop. My system then integrates and utilizes the data generated by their system.
- Built the API using WEB API .NET CORE, C#, Dapper

Fish Information System

📅 05/2024 - 05/2024

Developed a system to classify fish information for a client.
- Created a system for classifying fish information by uploading images, utilizing ReactJS, TailwindCSS, and MySQL.
- Helped my client how to present the system.
- Find a Fish API and store it all in my local database.

Mobile Student Grade View Application

📅 04/2023 - 05/2023
🔗 https://github.com/jpdevdotcom/Mobile-Student-Grade-View-Application

Created a mobile app for viewing students' grades.
- This was my first mobile application.
- Developed the application using Java and Android Studio.
- Made use of the Free Dictionary API to retrieve definitions, examples, phonetics, and other related information.

JPDictionary

📅 2023 - 2023

Created a dictionary utilizing the Free Dictionary API.
- Created a Next.js dictionary application with functionality similar to other open-source dictionaries.
- Utilized the Free Dictionary API in order to access the definitions, examples, phonetics, and etc.

EXPERIENCE

Personal Tutor

BSIT 2nd Year Student

📅 2023 - 2024   📍 Mondragon, Northern Samar

A second year BSIT Student of UEP.
- I tutored a second year BSIT student the basic fundamentals of JavaScript.
- Enlightened here the basic fundamentals of frontend development.

UEP ID Production

Internship

📅 02/2024 - 06/2024
📍 University Town, Catarman, Northern Samar

An office dedicated to producing university identification cards.
- Developed and deployed a management system for UEP ID Production.
- Developed an Online ID Application for UEP ID Production.
- Developed an API for UEP ID Production and gave it to the UEP IT Faculty.

EDUCATION
